Inquiry into Genoa bridge collapse highlights poor maintenance, design flaws

Issued on: 26/12/2020 - 11:52

The collapsed Morandi Bridge in the Italian port city of Genoa, Italy, 14 August 2018. REUTERS/Stefano Rellandini

Text by: Sabina Casteffranco

More than two years after the collapse of Genoa's Ponte Morandi bridge, on 14 August 2018, an independent report commissioned by a judge has pointed the finger at the bridge operator, finding poor maintenance and flaws in the construction were likely behind the deadly accident.

German railway had been planning repairs on deadly crash route - Welt

Reuters

1 minute read

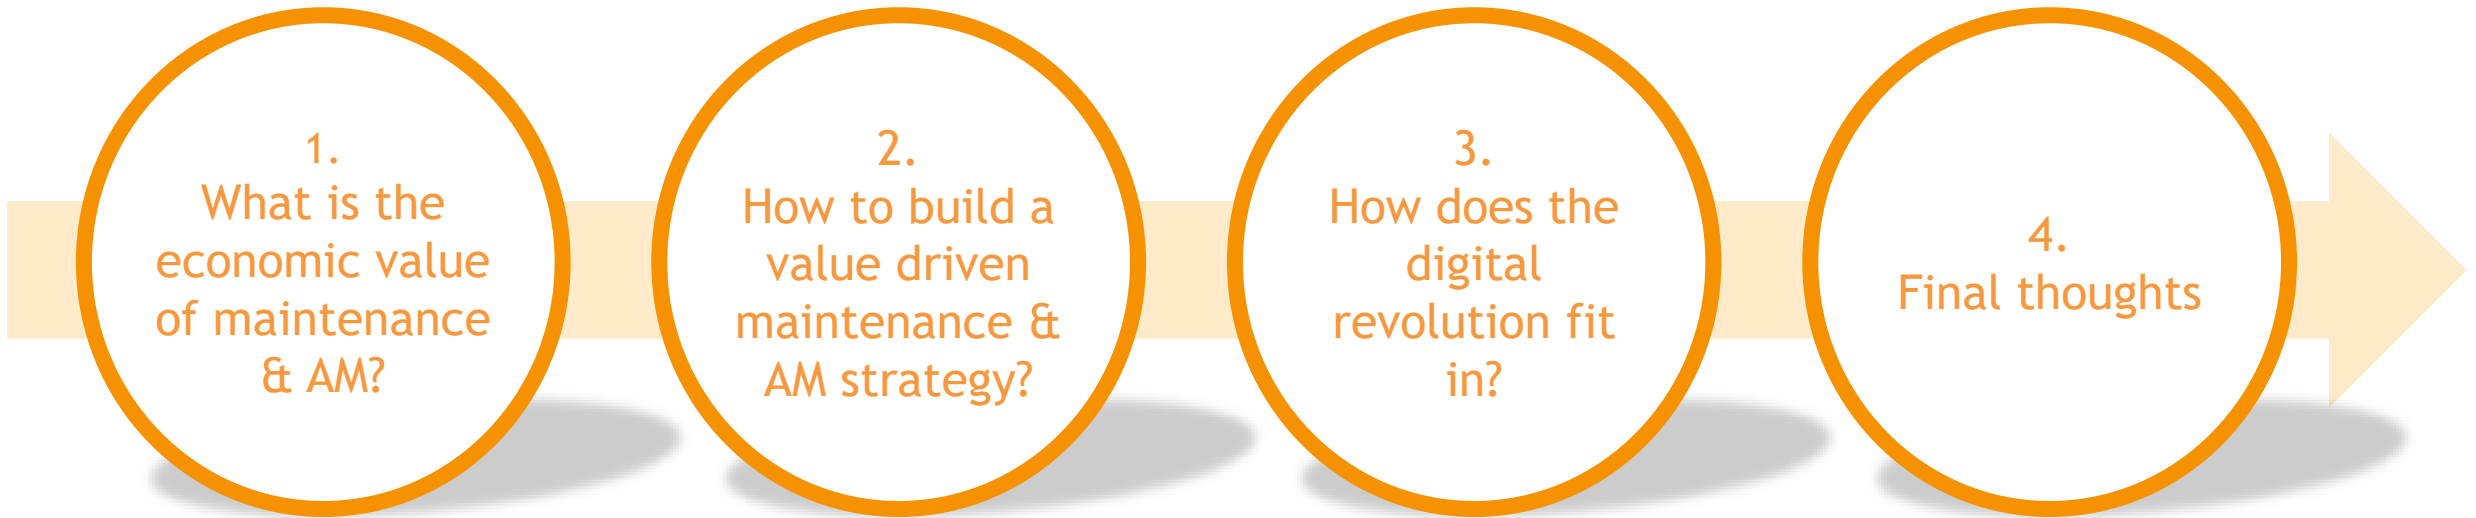

BERLIN, June 6 (Reuters) - State-owned rail company Deutsche Bahn (DBN.UL) had been planning rail repairs on the track section in southern Germany where a train derailed last week, killing five and injuring 44, newspaper Die Welt reported on Monday. [read more](#)

Maintenance & Asset Management Competences

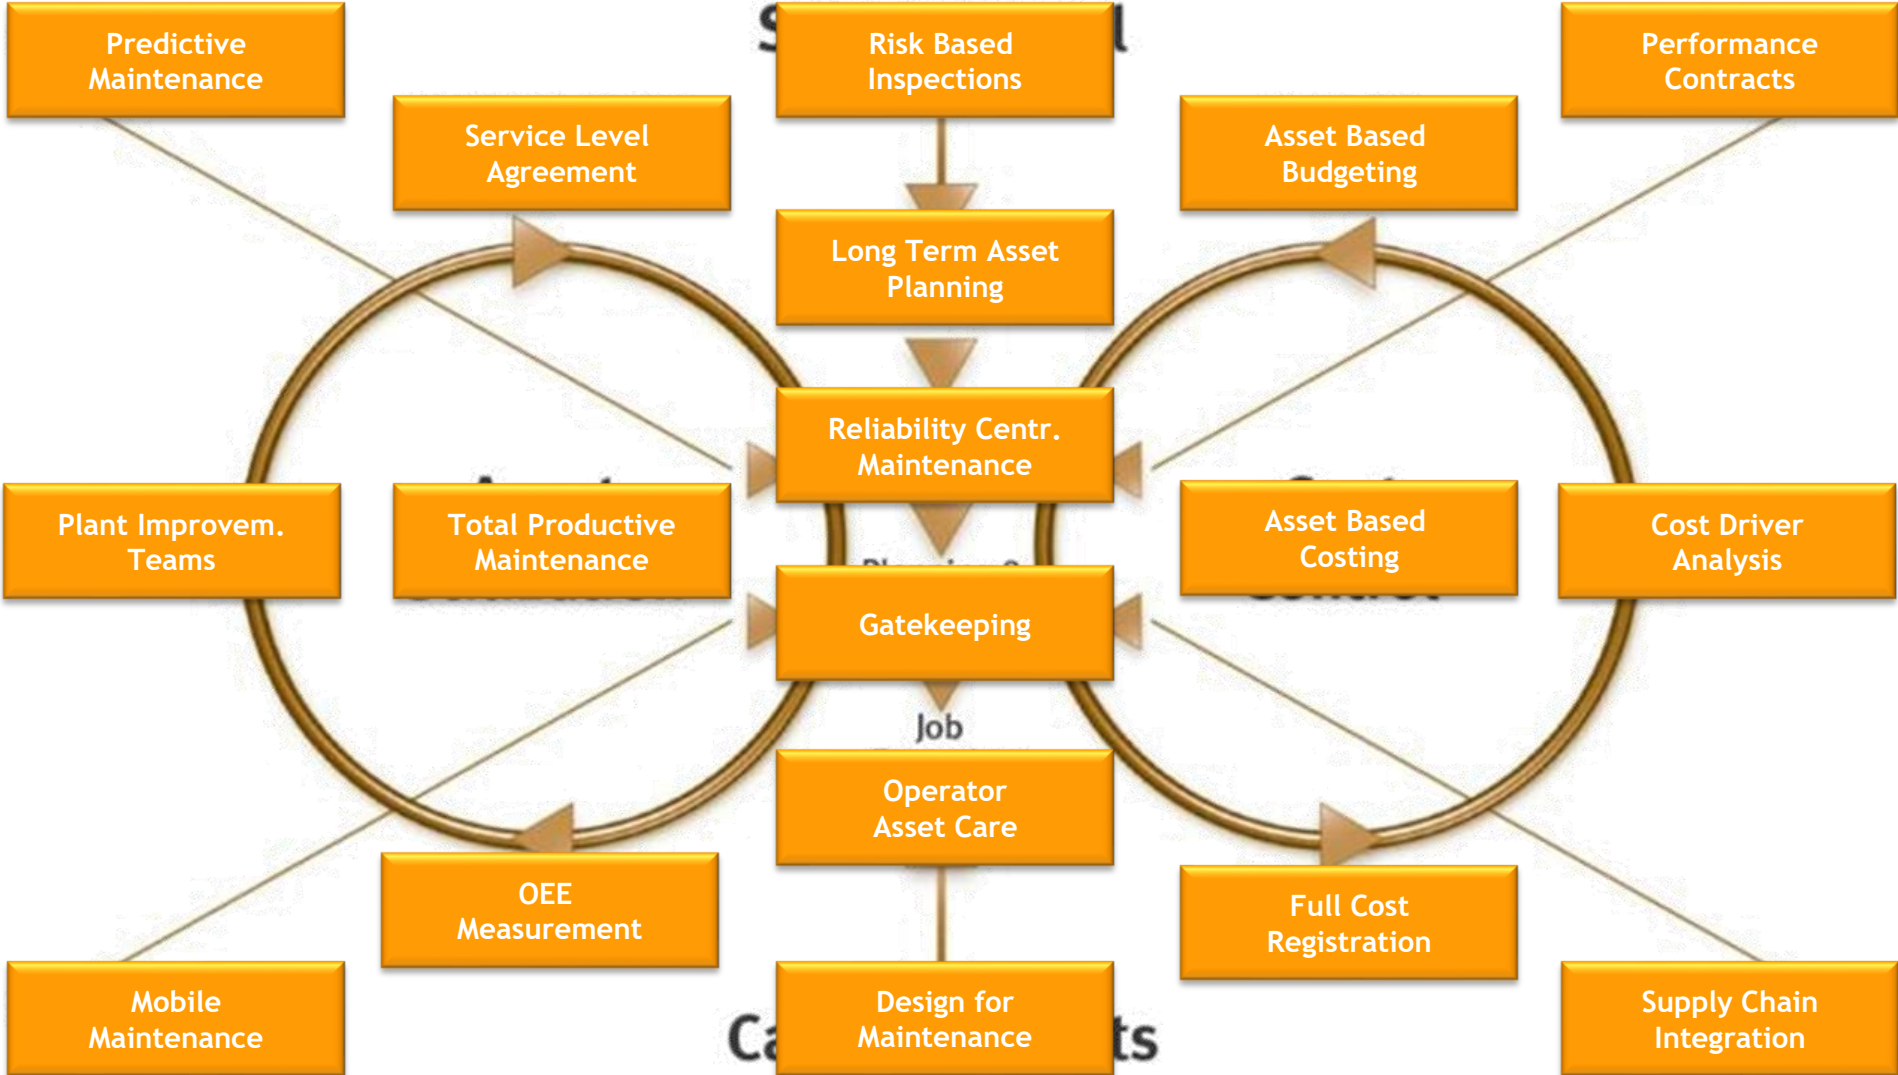

Measure Your Performance

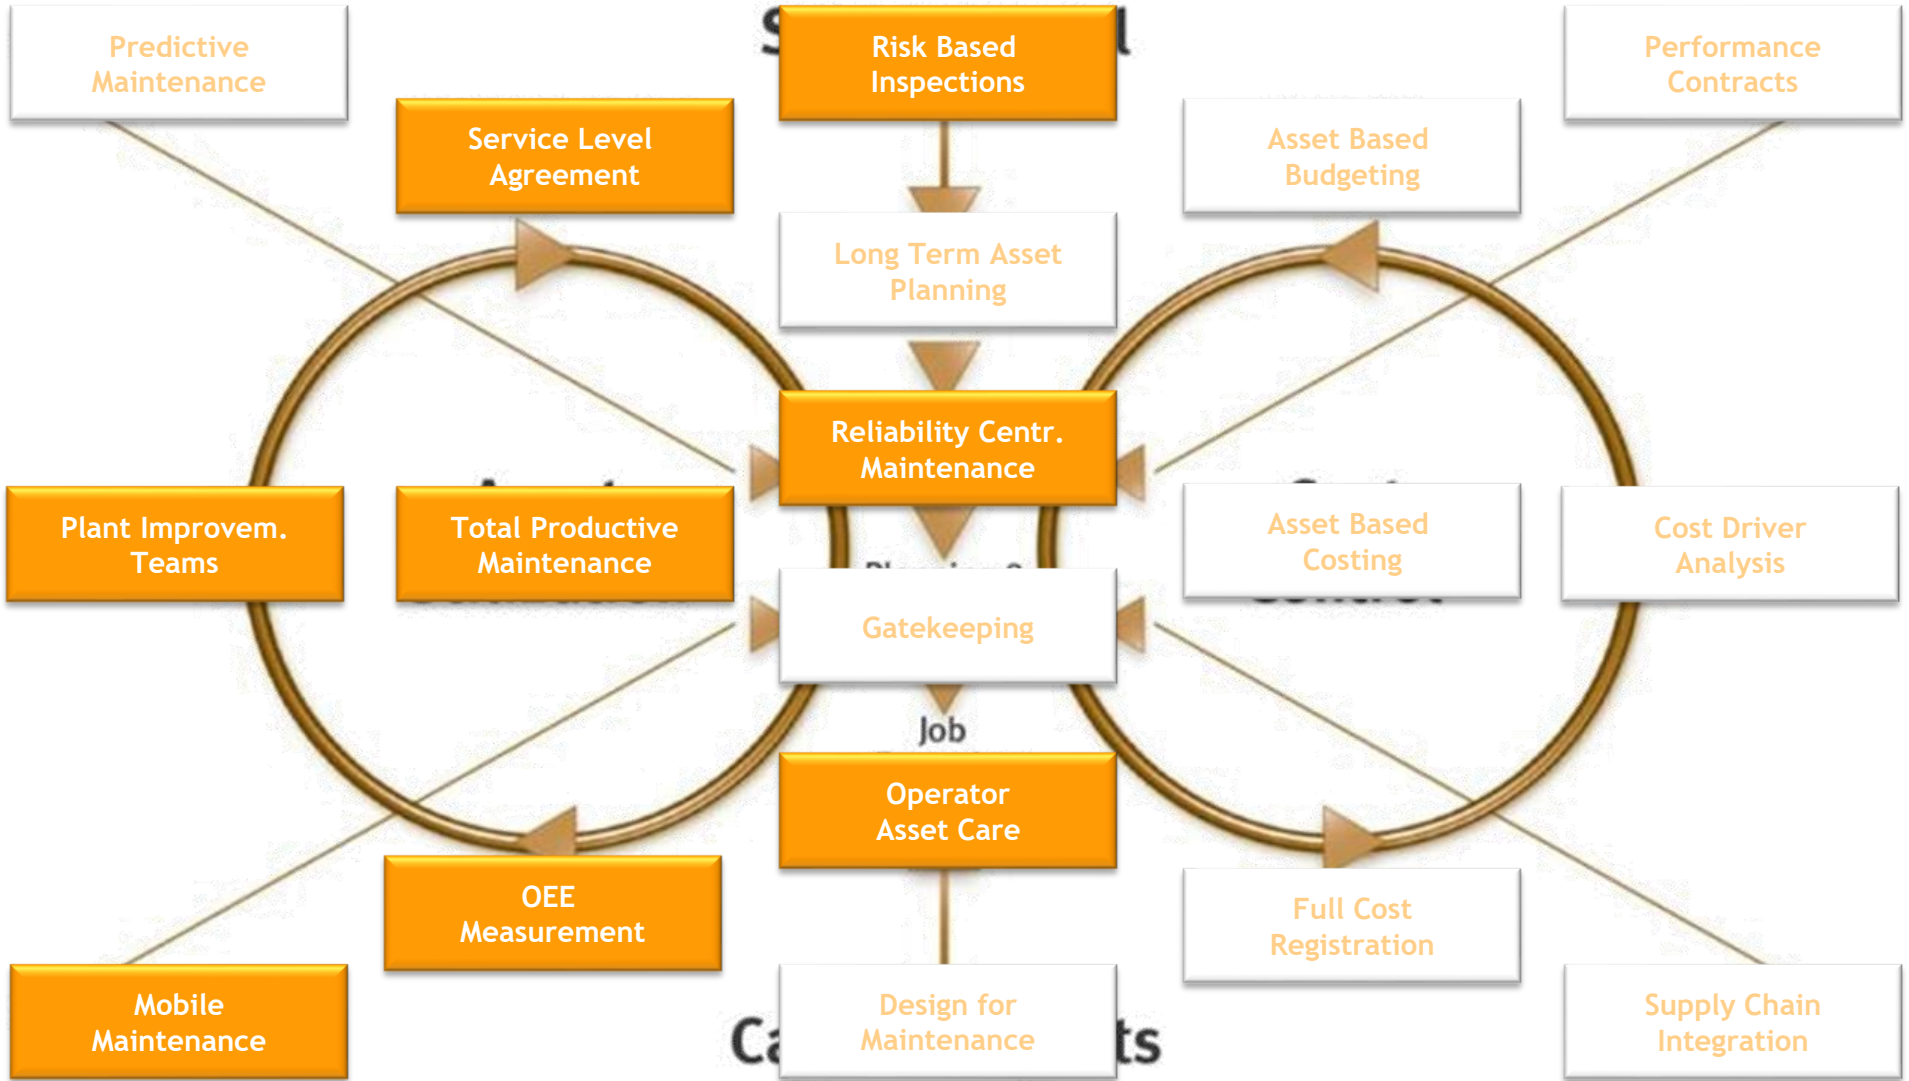

Benchmarking – Learn From Your Peers

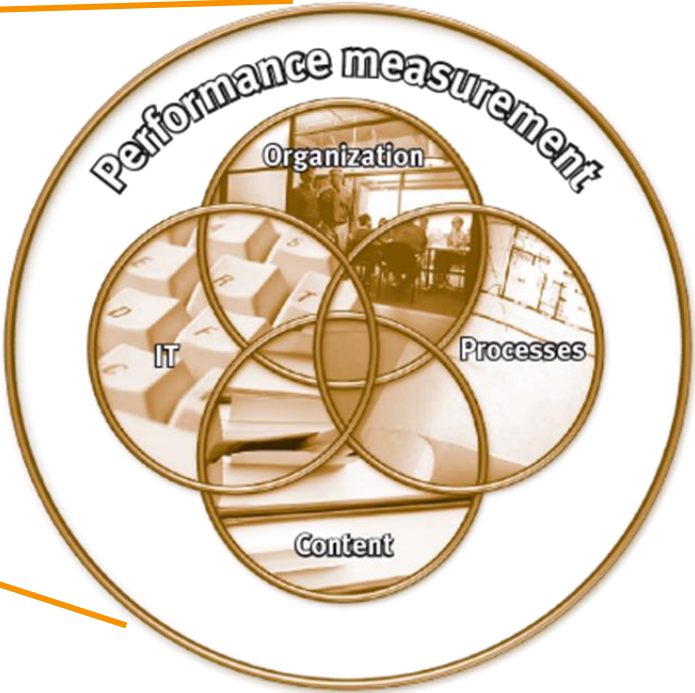

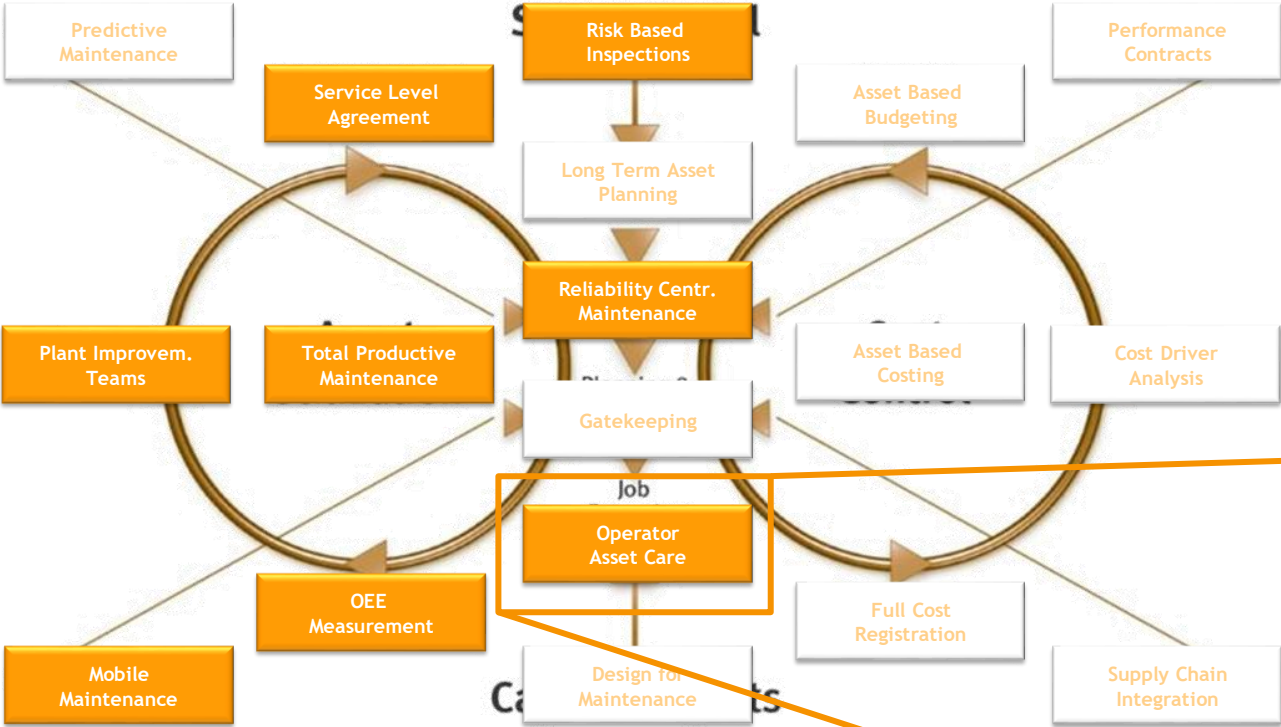

Improve With Best Practices

Focus On Your Core Competences

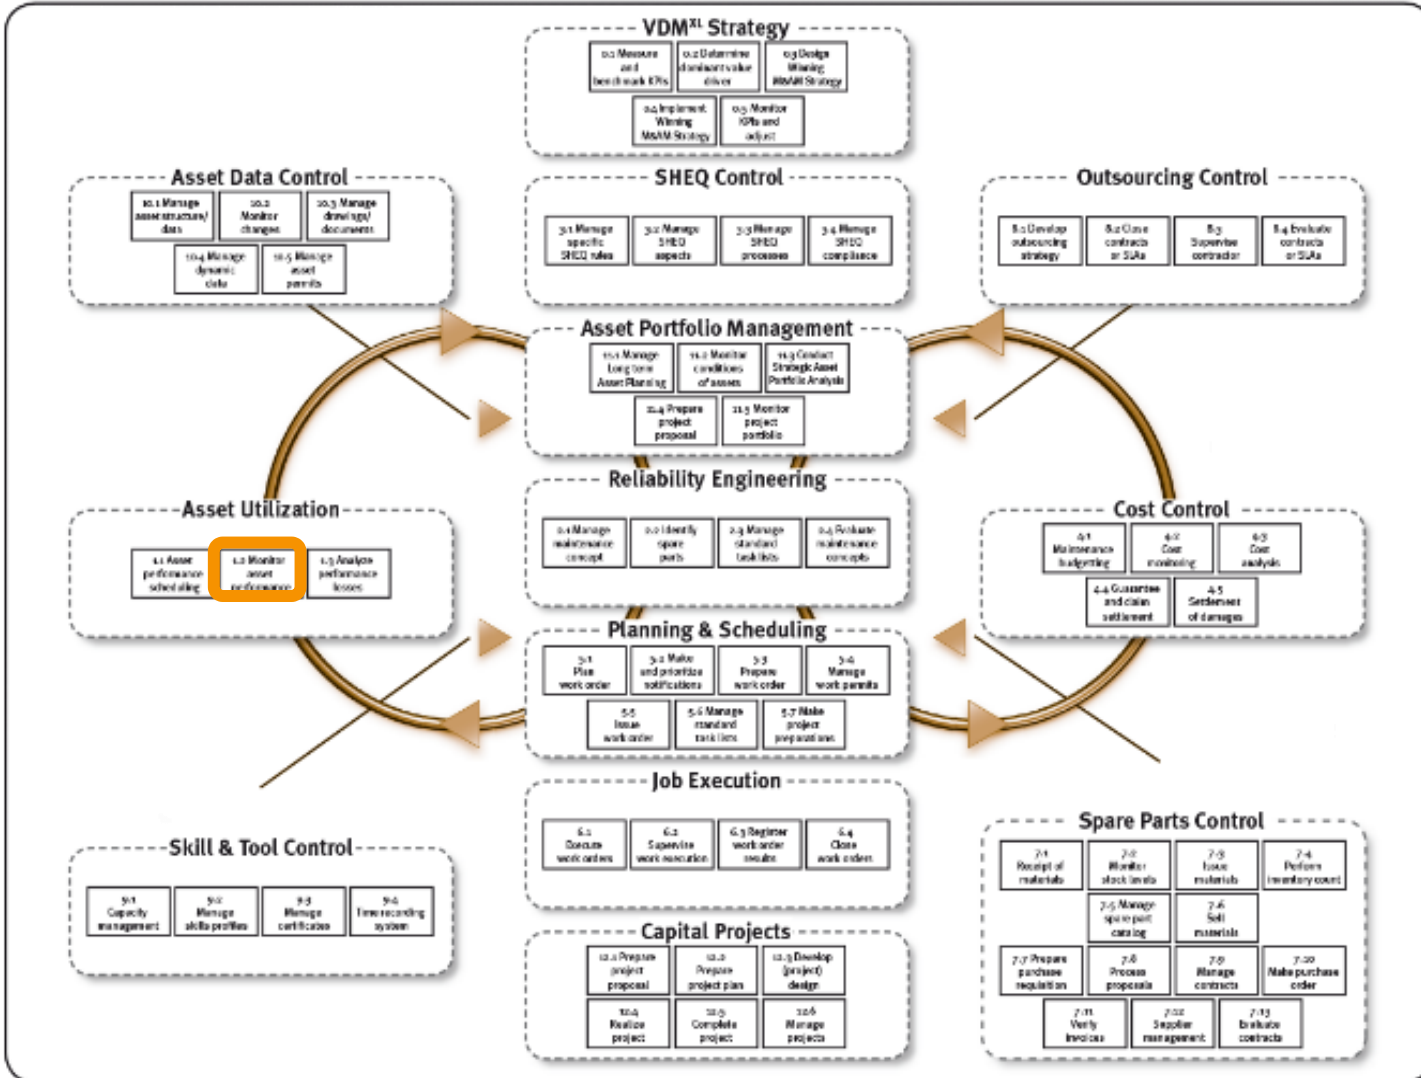

Implement Winning Strategy In 5 Dimensions

Start With Processes

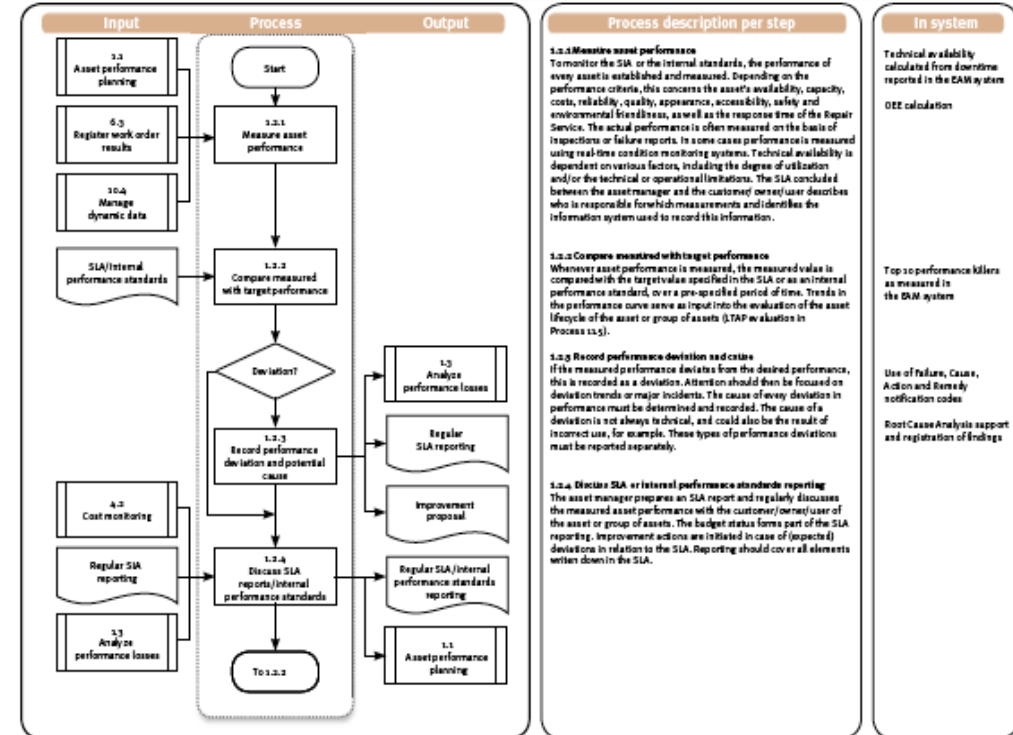

VDM^{XL} Process Map

Process 1.2: Monitor asset performance

Date: 21-8-2015

Revision: 1.0

Process description per step

1.2.1 Measure asset performance
To monitor the SIA or the internal standards, the performance of every asset is established and measured. Depending on the performance criteria, this concerns the asset's availability, capacity, costs, reliability, quality, appearance, accessibility, safety and environmental friendliness, as well as the response time of the Repair Service. The actual performance is often measured on the basis of inspections or failure reports. In some cases performance is measured using real-time condition monitoring systems. Technical availability is dependent on various factors, including the degree of utilization and/or the technical or operational limitations. The SIA concludes between the asset manager and the customer/ owner/user describes who is responsible for which measurements and identifies the information system used to record this information.

1.2.2 Compare measured with target performance
Whenever asset performance is measured, the measured value is compared with the target value specified in the SIA or an internal performance standard, over a pre-specified period of time. Trends in the performance curve serve as input into the evaluation of the asset lifecycle of the asset or group of assets (TAP evaluation in Process 1.5).

1.2.3 Record performance deviation and cause
If the measured performance deviates from the desired performance, this is recorded as a deviation. Attention should then be focused on deviation trends or major incidents. The cause of every deviation in performance must be determined and recorded. The cause of a deviation is not always technical, and could also be the result of incorrect use, for example. These types of performance deviations must be reported separately.

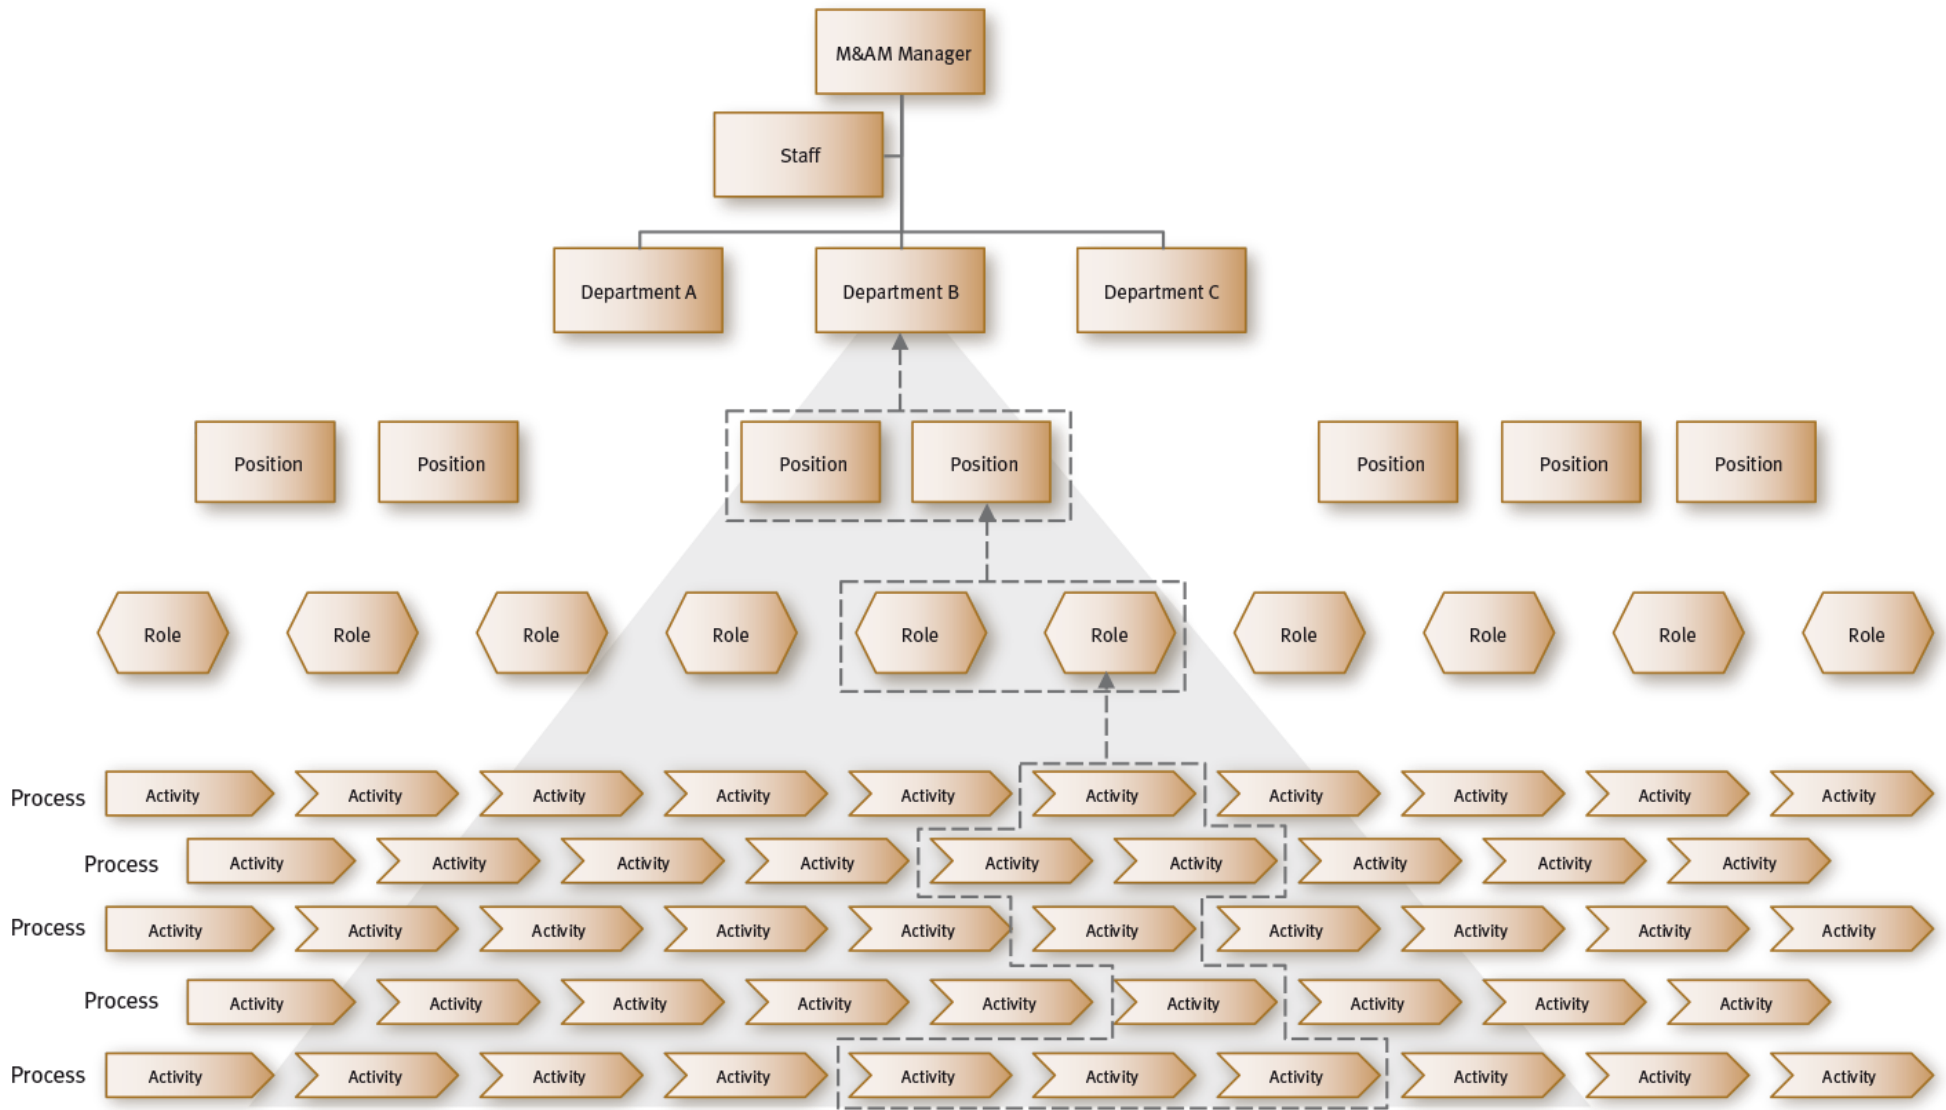

1.2.4 Discuss SIA or internal performance standards reporting
The asset manager prepares an SIA report and regularly discusses the measured asset performance with the customer/owner/user of the asset or group of assets. The budget status forms part of the SIA reporting. Improvement actions are initiated in case of (suspected) deviations in relation to the SIA. Reporting should cover all elements written down in the SIA.

Case Volvo

Insights

- Volvo Cars **manufactures cars** in different plants in Sweden, China and Belgium
- The company is well known because of its innovative maintenance approach and **TPM** awards
- 2005: After years of focus on Asset Utilization Volvo Cars wanted a maintenance model that has **more balance**
- Multi-site implementation of **VDM^{XL}** processes and KPI's supporting use of Maximo
- 2009: **50% reduction** of maintenance costs per produced car
- **Without impact** on safety and uptime

New Best Practices From The Digital Revolution

Case Sitech

Impressive results

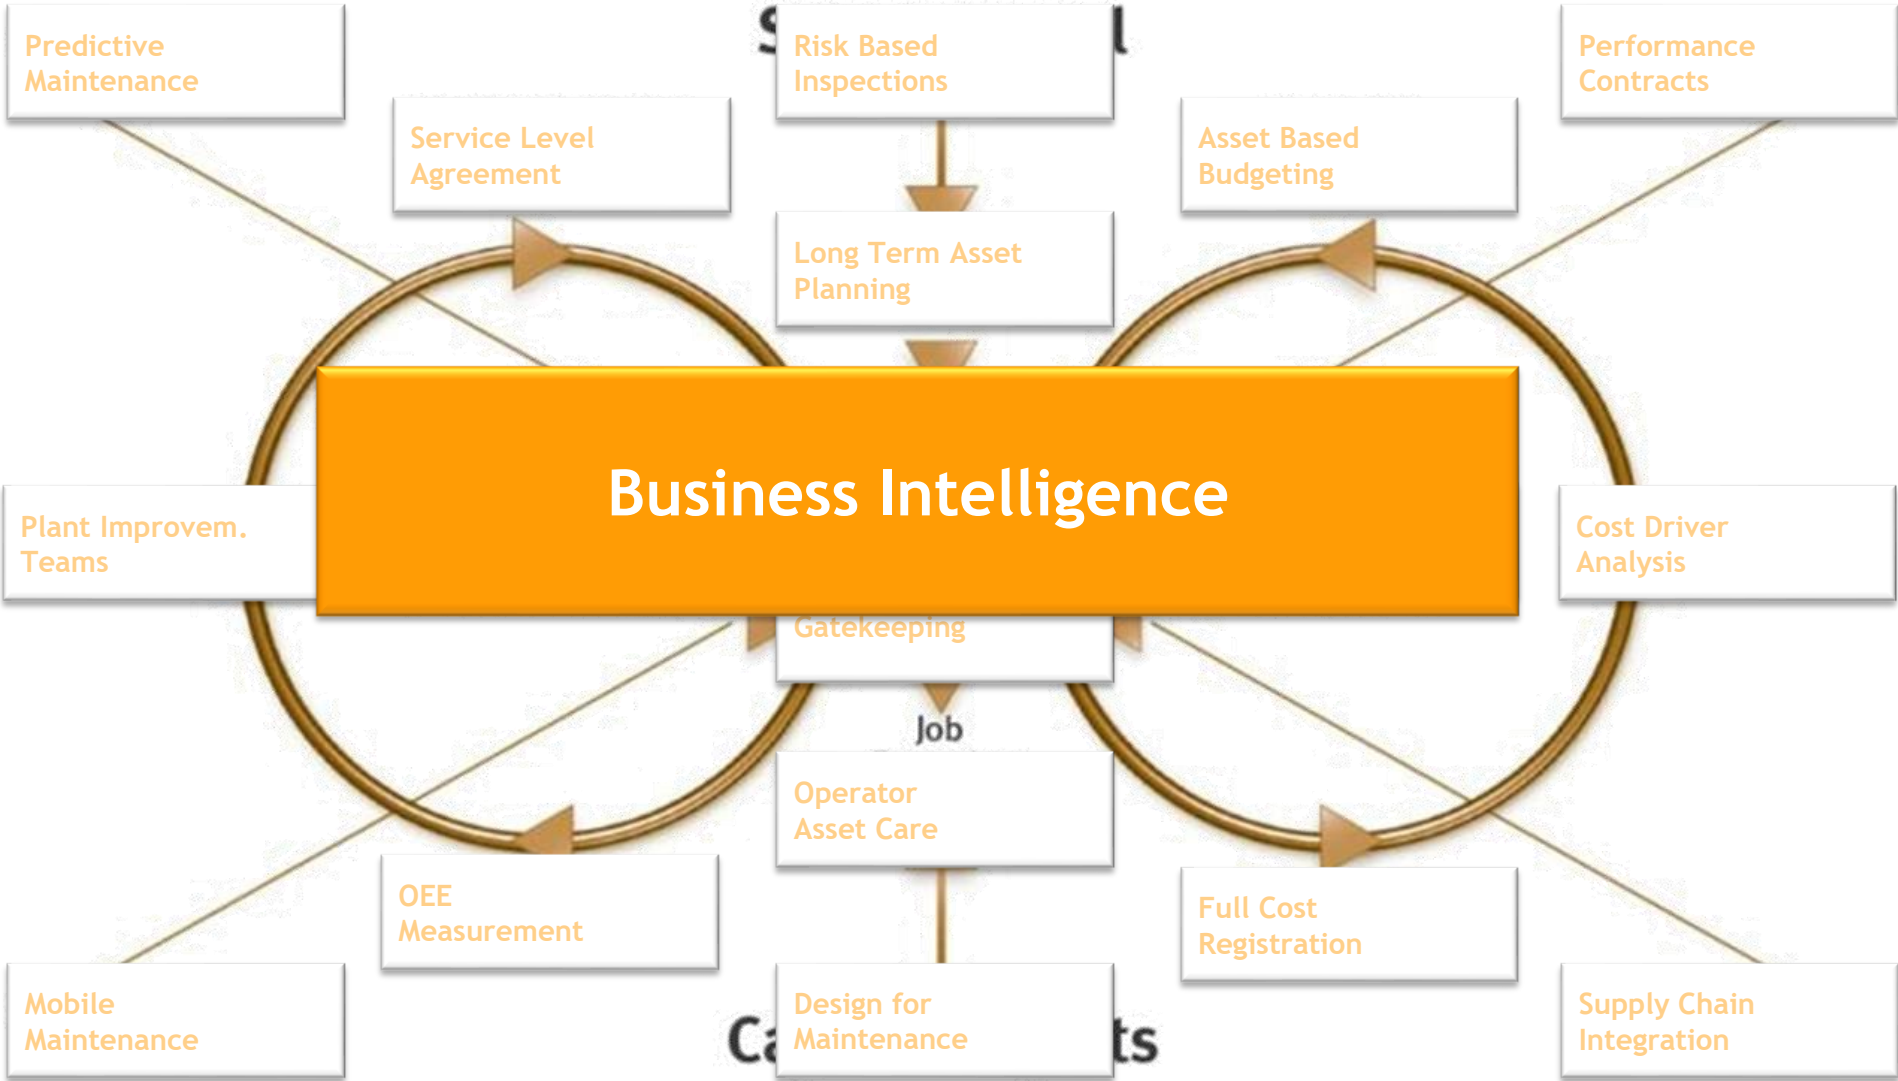

- Sitech is the central **maintenance & asset management organization** of Chemelot
- Chemelot is one of the largest **chemical sites** in Europe with plants of DSM, Borealis, OCI Nitrogen, Lanxess, Ineos and ChemicalInvest
- In 2011: **Maintenance Vision 2020** (based on VDM^{XL}) with a focus on Predictive Maintenance
- 2015-now: development and roll out of **Sitech Asset Health Center (SAHC)**
 - Condition monitoring of critical assets
 - Failure prediction using AI and Machine Learning
- Results: millions of Euros on **downtime savings** and **energy reduction**
